To pull through a length of 500 or 1,000 feet will require considerable power; cable contractors use a winch and capstan for this purpose, so constructed that it (the winch) can be placed in the manhole, while the men can work the capstan bars above ground. But where there is not cable enough to justify this expense, double pulley blocks will do almost as well. The method of using capstans in different positions is illustrated in Fig-35, which shows the apparatus employed by the Standard Underground Cable Co., Pittsburg, Pa.1 In districts where few wires are taken off, a heavy pole probably furnishes the simplest method of distribution, using either double arms faced at right angles to...
